1. General Mounting Steps

Installation Steps for Pole Mount Bracket:

Step 1: Open the straps — Unclasp or loosen the stainless steel hose clamps and pull the open ends through the slots on the bracket.

Step 2: Position the mount — Place the bracket against the desired pole (suitable for round, square, or solid poles) and wrap the metal straps around it.

Step 3: Tighten the clamps — Insert the loose end of each strap back into its fastener mechanism and use a screwdriver to turn the screw clockwise until securely tightened.

Step 4: Final inspection — Ensure the bracket is firmly attached to the pole and does not slip before mounting any equipment on it.
